SYLLABUS

1. Data about the program of study

1.1 Institution	The Technical University of Cluj-Napoca
1.2 Faculty	Faculty of Automation and Computer Science
1.3 Department	Computer Science
1.4 Field of study	Computer Science and Information Technology
1.5 Cycle of study	Bachelor of Science
1.6 Program of study / Qualification	Computer science / Engineer
1.7 Form of education	Full time
1.8 Subject code	48.2

2. Data about the subject

2.1 Subject name	2.1 Subject name Translator design					
2.2 Course responsible / lecturer Assoc. prof. dr. eng. Chifu Emil-Ştefan - emil.chifu@cs.utcluj.ro						
2.3 Teachers in charge of seminars / Assoc. prof. dr. eng. Chifu Emil-Ştefan - emil.chifu@cs.utcluj.ro laboratory / project						
2.4 Year of study	IV 2.5 Semester				2.6 Type of assessment (E - exam, C - colloquium, V - verification)	E
2.7 Subject category	DF – fundamentală, DD – în domeniu, DS – de specialitate, DC – complementară					DS
DI – Imp		lmpusă, L	DOp – o	pțion	ală, DFac – facultativă	DOp

3. Estimated total time

3.1 Number of hours per week	5	of which:	Course	2	Seminars	-	Laboratory	2	Project	1
3.2 Number of hours per semester	70	of which:	Course	28	Seminars	1	Laboratory	28	Project	14
3.3 Individual study:										
(a) Manual, lecture material and notes, bibliography							25			
(b) Supplementary study in the library, online and in the field							15			
(c) Preparation for seminars/laboratory works, homework, reports, portfolios, essays							27			
(d) Tutoring								10		
(e) Exams and tests							3			
(f) Other activities:							0			
3.4 Total hours of individual study (suma (3.3(a)3.3(f))) 80										

3.4 Total hours of individual study (suma (3.3(a)3.3(f)))			
3.5 Total hours per semester (3.2+3.4)			
3.6 Number of credit points	6		

4. Pre-requisites (where appropriate)

4.1 Curriculum	Formal Languages and Translators, Computer Programming, Data Structures and Algorithms
4.2 Competence	 Basic knowledge of programming and data structures (preferably in the C and Java languages) Concepts of generative grammars and formal languages To know the basic principles in the design of interpretors and translators for languages artificial Basic knowledge of relational databases and web applications

5. Requirements (where appropriate)

5.1. For the course	N/A
5.2. For the applications	Computers, specific software

1/5

6. Specific competence

6.1 Professional competences	C4 - Improving the performances of the hardware, software and communication systems (2 credits)
	 C4.1 - Identifying and describing the defining elements of the performances of the hardware, software and communication systems C4.2 - Explaining the interaction of the factors that determine the performances of the hardware, software and communication systems C4.3 - Applying the fundamental methods and principles for increasing the performances of the hardware, software and communication systems C4.4 - Choosing the criteria and evaluation methods of the performances of the hardware, software and communication systems C4.5 - Developing professional solutions for hardware, software
	and communication systems based on performance optimization
	C5 - Designing, managing the lifetime cycle, integrating and ensuring the integrity of
	 hardware, software and communication systems (2 credits) C5.1 - Specifying the relevant criteria regarding the lifetime cycle, quality,
	security and the computing system's interaction with the environment and the human operator
	C5.2 - Using interdisciplinary knowledge for adapting the computing system to the specific requirements of the application field
	• C5.3 - Using fundamental principles and methods for ensuring the security, the safety and ease of exploitation of the computing systems
	C5.4 - Proper utilization of the quality, safety and security standards in the field of information processing
	 C5.5 - Creating a project including the problem's identification and analysis, its design and development, also proving an understanding of the basic quality requirements
	C6 - Designing intelligent systems (1 credit)
	C6.1 - Describing the components of intelligent systems
	 C6.2 - Using domain-specific tools for explaining and understanding the functioning of intelligent systems
	C6.3 - Applying the fundamental methods and principles
	 for specifying solutions for typical problems using intelligent systems C6.4 - Choosing the criteria and evaluation methods for the quality,
	performances and limitations of intelligent systems
	C6.5 - Developing and implementing professional projects for intelligent systems

7. Discipline objective (as results from the key competences gained)

7. Discipline objective (as resul	13 11 0	in the key competences gamea,
7.1 General objective	•	To know the phases of programming language translators: lexical analysis, syntactic analysis, and code generation.
	•	To master the phases of Natural Language Processing and the BERT language models.
7.2 Specific objectives	•	To know the classes of languages for which efficient translators and interpreters can be implemented. To know the rules for processing typical statements for interpreters. By using the Prolog language, to build DCG parsers for natural language. To implement in the NLTK toolkit different phases of natural language processing. To define, train and test natural language text classifiers, by using the pretrained BERT language models.

8. Contents

8.1 Lectures	Hours	Teaching methods	Notes
Descriptive tools: extended Backus-Naur form.	2		
Regular grammars and finite automata: finite automata, state diagrams and regular expressions.	2	- The main ideas with multimedia techniques	
Context-free grammars and pushdown auromata: examples.	2	- Details and examples at the	
Lexical analysis: modules and interfaces (decomposition of the grammar, lexical analyzer interface), construction of the lexical analyzer (state diagrams, reserved words method).	2	blackboard, in interaction with the students	
LL parsers: the LL(1) parsing algorithm for extended BNF grammars.	2	- There are	
LL parsers: computation of FIRST and FOLLOW sets.	2	consultation hours	
LL parsers: examples of recursive-descent applications.	2	- Students are invited	
Theoretical results concerning the $LL(k)$ and $LR(k)$ grammars.	2	to collaborate in research projects	
LR parsers: LR(0) states, SLR(1) grammars.	2	researen projects	
LR parsers: LALR(1) grammars.	2		
LR parsers: the LALR(1) algorithm.	2		
LR parsers: shift-reduce transitions, chain production elimination.	2		
LR parsers: LR table compression.	2		
Basic concepts of attribute grammars.	2		

Bibliography:

8.2 Applications - Seminars / Laboratory / Project	Hours	Teaching methods	Notes
Laboratory			
Building recursive-descent parsers from extended BNF grammars.	2		
Recursive-descent (RD) applications: building abstract syntax trees (AST) for regular expressions.	2		
DR applications: code generator for an imperative language, using AST as intermediate code. Lowering the arithmetic expressions.	2		
Code generator for an imperative language, using AST as intermediate code. Lowering the loops and the conditional statements.	2	Brief presentation at the blackboard (the teacher), implementing	
Definite clause grammars (DCGs) for parsing natural language.	2	and testing examples	
DCG: building parse trees and checking agreement.	2	and exercises on the	
DCG: dealing with natural language ambiguity. Checking agreement in the Romanian language.	2	computer (the students)	
DCG: machine translation.	2		
The NLTK toolkit: semantic analysis of natural language with Lambda calculus.	2		
NLTK: subcategorization frames.	2		
NLTK: using the FrameNet lexical resourse, semantic role labeling (SRL).	2		
NLTK: discourse representation structures (DRS), anaphora resolution.	2		
NLTK: Dependency grammars and dependency parsers.	2]	
NLTK: the phases of a natural language processing pipeline: lemmatizing, part of speech tagging, named entity recognition, using the WordNet lexical thesaurus.	2		
Project		1	

Numerical encoding of natural language text: bag of words (BoW), TF-IDF, and bag of n-grams.	2	
Sentiment analyzer (classifier) using Logistic Regression (LR).	2	
Document categorization by using Logistic Regression: training and testing.	2	Brief presentation at
Text encoding by using Word to Vec (word2vec): document categorization.	2	the blackboard (the teacher), implementing
Using the pretrained BERT language model: sentinent analyzer using Logistic Regression.	2	and testing examples and exercises on the
Using BERT: fine-tuning the pre-trained BERT vectors.	2	computer (the
Using BERT: transfer learning for different downstream tasks: summarization, machine translation, semantic role labelling (SRL).	2	students)

9. Bridging course contents with the expectations of the representatives of the community, professional associations and employers in the field

It is a specialty course in Computer Science, its syllabus being both classical and modern. It teaches the students with the principles of efficient design and implementation of interpreters and translators for artificial languages. The syllabus of the course has been discussed with other important universities and companies from Romania, Europe, and USA. This syllabus has been evaluated by Romanian governmental agencies (CNEAA and ARAIS).

10. Evaluation

Activity type	Assessment criteria	Assessment methods	Weight in the final grade
Lectures	Problem-solving skills Attendance, Activity	Gradual evaluation during the lectures, based on a dialog with the students and their activity at the blackboard during the lectures There are consultation hours before the exam, during which bonuses for the final exam are granted The final exam is a written exam	44%
Laboratory	Problem-solving skills	Lab works:	35%
Project	Attendance, Activity	Gradual evaluation of the activity of students, at each lab meeting Bonuses for the final exam are granted Project lab meetings: - Gradual evaluation of the activity of students, at each project lab meeting	21%

Minimum standard of performance:

Modelling typical engineering problems using the domain specific formal apparatus. Grade

calculus: 35% lab + 21% project + 44% final exam Conditions for participating in the final exam: Lab \geq 5

Conditions for promotion: grade ≥ 5

Date of filling in: 26.02.2025	Responsible	Title, First name Last name	Signature
	Course	Assoc. prof. dr. eng. Emil-Ştefan CHIFU	
	Applications	Assoc. prof. dr. eng. Emil-Ştefan CHIFU	

Date of approval in the department	Head of department, Prof.dr.eng. Rodica Potolea
Date of approval in the Faculty Council	Dean, Prof.dr.eng. Vlad Mureşan
