9. Bridging course contents with the expectations of the representatives of the community, professional associations and employers in the field

The discipline is a domain discipline in Computers and Information Technology, its content being fundamental in the management of software projects. The content of the discipline contains the techniques and tools for managing various aspects of projects: scope of projects, activities, time, resources, risks, ending projects, etc. The content is compatible with similar subjects taught at prestigious universities in the country and abroad. In developing the content, important companies from Romania were consulted and it was evaluated by Romanian government agencies (CNEAA and ARACIS).
