#### **SYLLABUS**

## 1. Data about the program of study

| 1.1 Institution                      | The Technical University of Cluj-Napoca     |
|--------------------------------------|---|
| 1.2 Faculty                          | Faculty of Automation and Computer Science  |
| 1.3 Department                       | Computer Science                            |
| 1.4 Field of study                   | Computer Science and Information Technology |
| 1.5 Cycle of study                   | Master                                      |
| 1.6 Program of study / Qualification | Cybersecurity Engineering / Master          |
| 1.7 Form of education                | Full time                                   |

## 2. Data about the subject

| I / I Sunject name   |      |   | ata and<br>security |  | hine Learning for                         | Subject code            | 9.10    |    |  |  |
|--|------|---|---------------------|--|---|-------------------------|---------|----|--|--|
| 2.2 Course responsible / lecturer                            |      |   |                     | Prof. dr. eng. Camelia LEMNARU - Camelia.Lemnaru@cs.utcluj.ro  |   |                         |         |    |  |  |
| 2.3 Teachers in charge of seminars /<br>Laboratory / project |      |   | Assoc.              | Assoc.prof.dr.eng Ciprian OPRIŞA - Ciprian.OPRISA@cs.utcluj.ro |   |                         |         |    |  |  |
| 2.4 Year of study I 2.5 Sen                                  |      |   | nester              | 2  | 2.6 Type of assessment (E - verification) | exam, C - colloquiur    | n, V –  | E  |  |  |
|  |      | mative category: DA – advanced, DS – speciality, DC – complementary |                     |  |   |                         | DS      |    |  |  |
| 2.7 Subject category   | Opti | onality: I  | DI – imp            | osed   | , DO – optional (alternative)             | , DF – optional (free o | choice) | DO |  |  |

#### 3. Estimated total time

| 4  | of which:     | Course   | 2  | Seminars  | 0  | Laboratory   | 2   | Project  | 0  |
|--|---------------|--|--|---|--|--|---|--|--|
| 56   | of which:     | Course   | 28   | Seminars  | 0  | Laboratory   | 28  | Project  | 0  |
|  |               |  |  |   |  |  |   |  |  |
| d note   | es, bibliogra | aphy   |  |   |  |  |   |  | 32   |
| (b) Supplementary study in the library, online and in the field                      |               |  |  |   |  |  |   | 18   |  |
| (c) Preparation for seminars/laboratory works, homework, reports, portfolios, essays |               |  |  |   |  |  | 43  |  |  |
| (d) Tutoring   |               |  |  |   |  |  |   | 0  |  |
| (e) Exams and tests  |               |  |  |   |  |  | 2   |  |  |
| (f) Other activities:  |               |  |  |   |  |  | 0   |  |  |
|  | 56<br>d note  | 56 of which:<br>d notes, bibliogra<br>library, online ar | 56 of which: Course d notes, bibliography library, online and in the | 56 of which: Course 28 d notes, bibliography library, online and in the field | 56 of which: Course 28 Seminars d notes, bibliography library, online and in the field | 56 of which: Course 28 Seminars 0 d notes, bibliography library, online and in the field | 56 of which: Course 28 Seminars 0 Laboratory d notes, bibliography library, online and in the field | 56 of which: Course 28 Seminars 0 Laboratory 28 d notes, bibliography library, online and in the field | 56 of which: Course 28 Seminars 0 Laboratory 28 Project d notes, bibliography library, online and in the field |

| 3.4 Total hours of individual study (suma (3.3(a)3.3(f))) |     |
|---|-----|
| 3.5 Total hours per semester (3.2+3.4)                    | 150 |
| 3.6 Number of credit points                               | 6   |

## 4. Pre-requisites (where appropriate)

| 4.1 Curriculum | Data bases                            |
|----------------|---------------------------------------|
| 4.2 Competence | Statistics and probabilistic calculus |

## 5. Requirements (where appropriate)

| 5.1. For the course       | blackboard, beamer, computers                    |
|---------------------------|--|
| 5.2. For the applications | blackboard, beamer, computers, specific software |

## 6. Specific competence

| 6.1 Professional competences | develop information security strategy perform ICT security testing manage system security identify ICT security risks define security policies educate on data confidentiality provide ICT consulting advice perform data analysis implement ICT security policies ensure compliance with legal requirements ensure information privacy monitor developments in field of expertise keep up with the latest information systems solutions |
|------------------------------|--|
| 6.2 Cross competences        | The graduate  • develop an analytical approach   |
|                              | <ul> <li>taking a proactive approach</li> <li>developing strategies to solve problems</li> <li>being open minded</li> <li>coordinate engineering teams</li> </ul>  |

| 7. Expect          | ted Learning Outcomes                                      |
|--------------------|--|
|                    | computer programming                                       |
|                    | cyber attack counter-measures                              |
|                    | digital systems  |
|                    | security engineering                                       |
|                    | <ul> <li>software anomalies</li> </ul>                     |
|                    | <ul> <li>cloud technologies</li> </ul>                     |
|                    | database development tools                                 |
|                    | <ul> <li>network standards</li> </ul>                      |
|                    | operating systems  |
|                    | <ul> <li>cloud monitoring and reporting</li> </ul>         |
|                    | • cyber security   |
|                    | information confidentiality                                |
|                    | <ul> <li>building systems monitoring technology</li> </ul> |
|                    | business intelligence                                      |
| dge                | project management   |
| Knowledge          | cyber attack counter-measures                              |
| l ou               | open source model  |
| $\bar{\mathbf{z}}$ | decision support systems                                   |

|                                  | The student is able to:  |
|----------------------------------|--|
|                                  | analyse ICT systems  |
|                                  | create flowchart diagrams                                      |
|                                  | define technical requirements                                  |
|                                  | develop software prototypes                                    |
|                                  | execute software tests   |
|                                  | interpret technical texts                                      |
|                                  | keep up with the latest information systems solutions          |
|                                  | monitor system performance                                     |
|                                  | use software design patterns                                   |
|                                  | use software libraries   |
|                                  | debug software   |
|                                  | develop creative ideas   |
|                                  | perform project management                                     |
|                                  | ensure proper document management                              |
|                                  | maintain database security                                     |
|                                  | address problems critically                                    |
|                                  | assess ICT knowledge   |
|                                  | implement anti-virus software                                  |
|                                  | manage cloud data and storage                                  |
|                                  | manage databases   |
|                                  | store digital data and systems                                 |
|                                  | train employees  |
|                                  | use scripting languages for programming                        |
|                                  | collect cyber defence data                                     |
|                                  | create project specifications                                  |
|                                  | give live presentations  |
|                                  | provide information  |
|                                  | define technology strategy                                     |
| Skills                           | implement cloud security and compliance                        |
| S                                | implement spam protection                                      |
| S >                              | The student has the ability to work independently in order to: |
| litie<br>om o                    | develop an analytical approach                                 |
| onsibilitie<br>autonomy          | take a proactive approach                                      |
| on.                              | develop strategies to solve problems                           |
| Responsibilities<br>and autonomy | be open-minded   |
| a R                              | coordinate engineering teams                                   |

8. Discipline objective (as results from the key competences gained)

| 8.1 General objective   | Acquiring the ability to analyse large datasets. Considering the increasing number of malicious programs in the wild, the goal is to learn how to handle large collections of data, design, implement and evaluate malware detection and classification models.  |
|-------------------------|--|
| 8.2 Specific objectives | <ol> <li>Acquire the ability to use scripting languages and databases to handle large datasets.</li> <li>Design and implement distributed systems, understand and use the Map-Reduce paradigm.</li> <li>Understand and learn algorithms and techniques for searching in large collections of data.</li> <li>Understand and learn Machine Learning algorithms suitable for malware classification and detection.</li> </ol> |

#### 9. Contents

| 9.1 Lectures             | Hours | Teaching methods | Notes |
|--------------------------|-------|------------------|-------|
| Introduction to Big Data | 2     | Blackboard       |       |

| Big Data Storage                          | 2 | illustrations and        |
|---|---|--------------------------|
| Map-Reduce                                | 2 | explanations,            |
| Extracting Features from File Collections | 2 | beamer<br>presentations, |

# 9. Bridging course contents with the expectations of the representatives of the community, professional associations and employers in the field

This aspect will be achieved by recurrent discussions with the relevant industry employers (cybersecurity domain). Big Data courses are delivered within other master programs, but very few focus on computer and information security. Both malware and spam detection and classification require, from a practical standpoint, working with large collections of data, which requires big data analysis and machine learning. For example, there are several master programs which teach big data and business analytics, teaching methods which can be successfully applied to the data/computer security domain:

- CS246, Mining Massive Data Sets, Stanford https://web.stanford.edu/class/cs246/
- Big Data Analytics and Information Technology Missouri University of Science and Technology, USA
- Big Data, Masters in Computer and Information Security, University of Liverpool, UK

Se vor preciza, după caz: tematica seminariilor, lucrările de laborator, tematica și etapele proiectului.

#### 10. Evaluation

| Activity type | Assessment criteria   | Assessment methods  | Weight in the final grade |
|---------------|---|---|---------------------------|
| Course        | Ability to define and explain concepts and methods specific to course's field. Attendance frequency, interest, and interactivity during lecture classes.                      | Written exam, including online quiz tests (e.g. on Moodle platform) and presentation(s) of different subjects / paper in the course's field during semester time. | 60%                       |
| Seminar       | -   | -   | -                         |
| Laboratory    | Capability and ability to give correct and functional solutions to problems specific to course's field. Attendance frequency, interest, and interactivity during lab classes. | Evaluate lab activity. Evaluate lab assignments (homework). Evaluate solutions of problems given in a final lab exam.   | 40%                       |
| Project       | -   | -   | -                         |

Minimum standard of performance:

**Lecture**. **Attending minimum 50%** of lecture classes, to be allowed to take the final examination. Minimum final grade must be 5 for the exam to be considered passed.

Lab. Attending all lab classes (one lab could be recovered during the semester, and one more during re-examination sessions). Minimum lab grade must be 5 to be allowed at final exam. By the end of the course, the students should be able to work with big datasets, both structured and unstructured, using sequential and distributed algorithms (e.g. Map-Reduce). The main operations students should have assimilated are: search in large collections of data, classification and clustering, building and evaluating prediction models.
