

Syllabus

1. Data about the program of study

1.1 Institution	Technical University of Cluj-Napoca
1.2 Faculty	Automation and Computer Science
1.3 Departament	Automation
1.4 Field of study	Automation. Applied Informatics and Intelligent Systems
1.5 Cycle of study	Bachelor of Science
1.6 Program of study/Qualification	Automation and Applied Informatics (English)
1.7 Form of education	Full time

2. Data about the subject

2.1 Subject name	Signals and Systems			Discipline code	25.00
2.2 Course responsible/lecturer	Prof.dr.eng. Daniel Moga – daniel.moga@aut.utcluj.ro				
2.3 Teachers in charge of applications	Prof.dr.eng. Daniel Moga – daniel.moga@aut.utcluj.ro Conf.dr.eng. Nicoleta Stroia – nicoleta.stroia@aut.utcluj.ro				
2.4 Year of study	2	2.5 Semester	2	2.6 Assessment (E/C/V)	E
2.7 Type of subject	DF – fundamental, DS – specialty, DC – complementary				DF
	DOB – compulsory, DOP – elective, DFA – optional				DOB

3. Estimated total time

3.1 Number of hours per week	4	of which:	Course	2	Seminar	0	Laboratory	2	Project	0
3.2 Number of hours per semester	56	of which:	course	28	Seminar	0	Laboratory	28	Project	0
3.3 Individual study										
(a) Manual, lecture material and notes, bibliography										14
(b) Supplementary study in the library, online and in the field										10
(c) Preparation for seminars/laboratory works, homework, reports, portfolios, essays										17
(d) Tutoring										0
(e) Exams and tests										3
(f) Other activities:										0
3.4 Total hours of individual study (sum of (3.3(a))...(3.3(f)))					44					
3.5 Total hours per semester (3.2+3.4)					100					
3.6 Number of credit points					4					

4. Pre-requisites (where appropriate)

4.1 Curriculum	
4.2 Competence	Electric and electronic elementary circuits, Basic knowledge of systems theory, Elements of linear algebra and calculus, Elementary numerical methods

5. Requirements (where appropriate)

5.1. For the course	Blackboard, projector, computer / Internet access to online platforms
5.2. For the applications	Computers, specific software

6. Specific competences

Professional competences	C2 Operating with basic concepts of computer science, information technology and communication C3 Operating with fundamentals of control engineering, process modelling, simulation, identification and analysis methods, and computer aided design.
--------------------------	---

Cross competences	
-------------------	--

7. Expected learning outcomes

Knowledge	Describes, identifies, summarizes elementary concepts and methods related to systems and ways to investigate system properties through signal analysis
Skills	Analyzes systems using studied theories and designs, models and implements systems for concrete applications Uses specific theories and tools for analysis, simulation, design and implementation of signal processing algorithms
Responsibilities and autonomy	Performs processes in systems engineering project management, taking on different roles in the team and describing clearly and concisely, verbally and in writing, the results

8. Course objectives

General objective	Understanding and mastering of elementary techniques for signal representation and manipulation
Specific objectives	• Computation of continuous and discrete time signal parameters • Algorithms and circuits for implementing elementary signal processing methods • Learning of basic system analysis techniques • Students become acquainted with Matlab signal processing capabilities

9. Contents

9.1 Lecture	No.hours	Teaching methods	Notes
The concept of system. The concept of signal. Examples	2	Presentations, discussions	
Signals classification and properties. Sampling and aliasing. Sample and hold circuits	2		
Systems classification and properties. Interconnection of systems	2		
Representing signals in terms of impulses. Convolution of 1D discrete signals. Convolution of 2D discrete signals. Applications	2		
Properties of discrete LTI systems (causality, stability). Discrete linear filters. Representing continuous signals in terms of impulses. Convolution of continuous signals. Continuous filters	2		
Vector spaces. Projections on subspaces generated by orthogonal systems of functions.	2		
Fourier series representation of periodic signals. Extensions of non-periodic signals defined over a finite interval to periodic signals. Fourier Series for odd and even signals	2		
The approximation of a periodic signal using truncated Fourier series and convergence conditions. Gibbs phenomenon. Dirichlet conditions. Fourier Series as a projection	2		
Fourier series properties. Fourier series applications	2		
The concept of transforms. Fourier Transform	2		
Sampling theorem and aliasing. Fourier transform applications. 2D Fourier transform	2		
Discrete Fourier transform	2		

Digital signals compression. Discrete Cosine Transform and lossy compression. JPEG Algorithm	2		
Mellin Transform and applications	2

9.2 Applications (seminar/laboratory/project/practical work)	No.hours	Teaching methods	Notes
Introduction to Matlab	2	Exercises, Implementation in Matlab	
Representing signals in Matlab	2		
Periodic signals	2		
Elementary signals	2		
System properties	2		
One-dimensional correlation applications for continuous and discrete periodic signals	2		
One-dimensional discrete signals convolution	2		
Bidimensional convolution and image filtering	2		
Bidimensional correlation and template matching	2		
Fourier series	2		
Shape descriptors. Fourier descriptors	2		
Discrete Fourier transform applications	4		
Frequency domain filtering of bidimensional signals	2

10. Bridging course contents with the expectations of the representatives of the community, professional associations and employers in the field

Laboratory applications content was discussed with industry representatives and employers in the field
--

11. Evaluation

Activity type	11.1 Assessment criteria	1.2 Assessment methods	11.3 Weight in the final grade
11.4 Course Module 1 (weeks 1-6)	Knowledge of applications of vector spaces and projection methods to the representation of signals; Properties of systems; Applications of convolution. Knowledge of methods for signal representation, analysis and synthesis. Applications of transforms in systems analysis.	Module 1 Verification - Written exam (E1)	30%
Module 2 (weeks 7-14)		Module 2 Verification - Written exam (E2)	30%
11.5 seminar/laboratory/project/practical work	Skills related to: - representation and manipulation of signals using Matlab signal processing functions - applied methods for analysis and synthesis of the signals - applied methods for inspecting systems properties	(L) Practical assessment	40%
11.6 Minimum performance standard Exam grade E1 ≥ 5 , Exam grade E2 ≥ 5 , Practical assessment grade L ≥ 5 ; Final grade ≥ 5			

Date of filling in:		Title Firstname NAME	Signature
15.07.2026	Course	Prof.dr.eng. Daniel MOGA	
	Applications	Prof.dr.eng. Daniel MOGA	
		Conf.dr.eng. Nicoleta STROIA	

Date of approval by the Department Board	Head of Departament Prof.dr.eng. Honoriu VĂLEAN
Date of approval by the Faculty Council	Dean Prof.dr.eng. Vlad MUREȘAN
