

Are you a passionate about embedded software, analog or digital hardware design, FPGAs or microcontrollers?

Where **what if** becomes what is.

If yes come and join our summer practice program where Analog Devices engineers will guide you through the steps of building a complete instrumentation application all the way from creating your own mixed signal board to developing FPGA code and Linux based software stacks.

Please send your application to [melinda.zerkula@analog.com](mailto:melinda.zerkula@analog.com)
